Speaker

Chris Emery Specialist Endodontist

Title

Endodontics in 10 Questions

Aims and Objectives

The aim of this lecture is to take a very abridged over-view of Endodontics.

To achieve this I have composed ten questions which will provide discussion areas involving endodontic topics. It will also demonstrate the historic significance of endodontic developments since the sixties, when I started!

Following this lecture, the delegate will have been exposed to a broad range of endodontic information that will enable them to perhaps tackle their endodontic treatments with more confidence.

Intended Learning Outcome

The lecture provides the delegates with a whirlwind overview of Endodontics.

This will allow them to pursue specific aspects of root canal therapy that they consider of interest or work on improvement in their own clinical practice.

Venue

Free Webinar

Date and time

Thursday 7th of October 2021

6pm - 7pm

CPD

This course meets the criteria to meet the GDC verifiable eCPD Development Outcome A,B,C,D for 2 hour.

Please contact Sarah on sarah@specialistendocentre.co.uk to register for this lecture.

Chris Emery

BDS MSc MGDS MRD FDS

I qualified at The Royal London Hospital in 1968 and worked for two years in Oral Surgery before establishing my own NHS General Dental Practice.

After completing the Endodontic Masters Programme at The Eastman Dental Institute and obtaining the Membership in Restorative Dentistry Diploma in 1994, I gained admittance to the General Dental Council Endodontic Specialist Register, then limiting my practice to endodontic referrals.

I have always enjoyed endodontic postgraduate teaching and hold a part-time appointment as Honorary Clinical Lecturer in Endodontics at The Royal London Hospital Dental Institute.

I regard myself as very fortunate that the first 25 years of my practicing life was spent in general dental practice and the second 25 years in referral Specialist Endodontic Practice. I believe this gives me a unique insight into the problems we, as practitioners encounter in our day-to-day clinical practice.
